

Curriculum Map

Subject: Medical Science

Year Group: 12 & 13

| | Autumn Term | Spring Term | Summer Term |
|---------|---|--|---|
| Year 12 | Unit 1 (28/90 GLH) | Unit 1 (24/90 GLH) | Unit 1 (38/90 GLH) |
| | This unit develops knowledge and | As before | As before |
| | understanding of human anatomy and | | |
| | physiology. The unit will develop an | Unit 3 (45/45 GLH) | Unit 4 (32/100 GLH) |
| | understanding of the function of organ | This unit develops knowledge and | This unit develops knowledge and |
| | systems and some problems that can | understanding of planning, conducting | understanding about the science of |
| | occur in these systems. The unit will | and reporting of research in medical | medicines, and how they work through |
| | enable learners to understand the | sciences using a range of | their interactions with body systems. It also |
| | normal functioning of the body at a | methodologies and techniques. It is | introduces cancer, its relationship to |
| | cellular and physiological system level. | intended to enable the acquisition of | genetics, and the range of therapeutic |
| | They will learn how these systems react | the necessary knowledge and skills to | treatments available. The unit will enable |
| | in different situations, and how these | carry out research in order to obtain | learners to provide information to a range |
| | systems can go wrong in order to report | meaningful information. It also seeks to | of audiences on now medicines work, to |
| | on nealth of Individuals. | promote an understanding of the | bring about effective freatment of |
| | | processes involved in drawing | alseases and alsorders. |
| | This unit dovelops knowledge and | data Lograers will use their knowledge | |
| | understanding about the physiological | and understanding of resourch | |
| | measurements that can be made to | methods to conduct their own research | |
| | assess the function of major body | They will process the data they have | |
| | systems. It relates anatomy and | collected and make evidence based | |
| | physiology to physiological | conclusions | |
| | measurement test results, through an | | |
| | understanding of the principles of the | | |
| | measurement techniques. The unit will | | |
| | enable learners to perform tests which | | |
| | will accurately measure a range of | | |
| | physiological functions. They will be able | | |
| | to interpret the results of these tests and | | |
| | other tests and link this to possible | | |
| | physiological disorders. | | |
| Year 13 | Unit 4 (68/100 GLH) | Unit 5 (30/45 GLH) | Unit 6 (10/35 GLH) |
| | As before | As before | As before |
| | | | |

| | Autumn Term | Spring Term | Summer Term | | |
|------------|---|--|-------------|--|--|
| | Unit 5 (15/45 GLH) | Unit 6 (25/35 GLH) | | | |
| | This unit develops knowledge and | This unit is the overall synoptic unit for | | | |
| | understanding about the clinical | the Diploma qualification. It provides | | | |
| | laboratory techniques that can be used | the opportunity for candidates to | | | |
| | to assess body functions. It relates | demonstrate their understanding of the | | | |
| | knowledge and understanding of | connections between the other five | | | |
| | human physiology and biochemistry to | units of this Medical Science | | | |
| | clinical measurement test results | qualification. The content of this unit | | | |
| | through an understanding of the | requires candidates to apply skills, | | | |
| | principles of the measurement | techniques, knowledge, understanding | | | |
| | techniques. The unit will enable learners | and concepts from across the | | | |
| | to perform tests which will accurately | qualification content in order to | | | |
| | measure a range of biochemical and | complete the required assessment. The | | | |
| | microbiological parameters. They will be | assessment provides integrated and | | | |
| | able to interpret the results of their tests, | purposetul contexts in which | | | |
| | and other test results and link these | candidates will demonstrate the | | | |
| | results to possible physiological | knowledge, understanding and skills | | | |
| | disorders. | they have developed through all the | | | |
| | | other units within the qualification. The | | | |
| | | contexts provided are medical case | | | |
| | | studies, which require candidates to | | | |
| | | analyse the information provided and | | | |
| | | develop a morougn assessment of the | | | |
| | | situation based on their knowledge and | | | |
| | | Understanding gained from the other | | | |
| Skille | Throughout the course learners will develo | onits of this qualification. | ad to: | | |
| Skills | Infoughout the course learners will develop a plethora of skills including but not limited to: | | | | |
| Developed | Collecting physiological data from patients Planning and liaising effectively with support staff to set up their own practical tests Designing their own gualitative and guantitative methods to collect data | | | | |
| | | | | | |
| | Processing data using graphical m | ethods | | | |
| | Using mathematical skills to interpret data Communicating effectively to report on health Making effective links throughout the whole course to complete a full medical case study of a patient | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| Assessment | Unit 1 and Unit 6 – External examinations | | | | |
| | Unit 2, 3, 4, 5 – Internally assessed through practical coursework and presentations | | | | |

| | Autumn Term | Spring Term | Summer Term | | |
|---|---|---|-------------|--|--|
| | Formative assessment will be used thoroughly during lessons during starters, plenaries, classwork and homework | | | | |
| Literacy, Numeracy, Diversity, IT and British Values. | Literacy: The course promotes good literacy and scientific literacy throughout. Unit 4 is assessed through presentation, which will help students plan and present a formal piece of work this will rely on strong literacy skills. Unit 3 will require learners to carry out a great deal of their own medical research and evaluate research. This will expose the learners to longer scientific texts and require a high level of literacy and comprehension skills from the pupils. | | | | |
| | Numeracy: Numeracy is essential through research. The pupils are expected to be a pupils will have to present their findings fro able to confidently manipulate data from | : Numeracy is essential throughout the course. The use of statistics is essential in Unit 4 when analysing medical he pupils are expected to be able to analyse statistics and graphical representations of data in Unit 1 and Unit 4. The nave to present their findings from the practical work they carry out throughout the course graphically and will be nfidently manipulate data from their findings in these practicals. | | | |
| | Diversity: Pupils will be exposed to a variety of case studies that exhibit a wide range of diversity. During the study of disease in Unit 4 learners will see how the prevalence of certain diseases varies between demographics and this will be discussed at length. | | | | |
| | IT: Pupils will use IT in lessons to help undertake their medical research project. They will be assessed on their ability to perform presentation that they will have to prepare using IT skills. Pupils will need to use IT to present and manipulate their findings from practical work. | | | | |
| | British Values: Particularly in Unit 2 when taking physiological measurements from individuals, learners will be exposed to topics such as individual liberty and mutual respect. | | | | |
